

Questetra: Cloud Workflow v10 gets Expanded Free Tier - Unveiling New Filtering Chart for Business Process Improvement -

Kyoto, Japan – November 10, 2014 -- Questetra, Inc., the global SaaS provider of Business Process Management (BPM), today announced that they have published the new version 10.0 of the cloud-based Workflow product “Questetra BPM Suite” on November 10, 2014.

In this new version which is a major upgrading since two years, it is enhanced features such as 'Filtering Chart' which aggregates flowed data graphically. This will help, for example, to analyze Business Progression by graphing the Issues that had been approved and Invoice PDF had been automatically generated in it, into a chart of 'Transition of Monthly Billing total'.

Moreover, the Number of Users Limitation on Free SaaS Edition is expanded to 10 Users, to commemorate Release of version 10.0. This will allow easier introduction of Cloud environment for the owners of smaller office or for a particular section in a company.

Filtering Chart

Questetra BPM Suite

Recently, Workflow products are becoming actively used for passing business data. Using these Workflow products, a variety of operational efficiency Business improvement has been achieved, i.e. Paperless, Visualization of Operational progress, or even Auto-calculating of Consumption Tax and Auto-generation of Invoice PDF'. "Questetra BPM Suite" is a Cloud-based Workflow product which you can start running wherever connectible to the Internet. It will widely support Teleworking also.

It has a great feature that you can modify the configurations with easy Drag & Drop configuration. It requires no Programming skills even for setting Automated processing such as 'Email Auto-transmission' or 'Process to Process connection'. Therefore, you can continuously improve complicated business process by worker-driven, e.g. Decision-making, Translating, or Complaint handling. In addition, with the knowledge of Programming or Scripting, you can expand frameworks for Automated Data Processing or IoT connection using APIs.

Graphical Business Data Analysis feature (v10.0)

With this feature, you can filter those Numeric data and number of Issues which has flowed on Workflow, and summarize the result in a Chart. e.g. Line Chart of 'Weekly Estimate amount' which shows the total price of the approved estimate in 'Estimate flow'; Bar Chart of 'Type of Question and its Number' which shows the Types of Questions and its number in 'Inquiry flow'. (Filtering Chart)

Other Improvements

There are various improvements other than Filtering Chart in v10.0.

Exceptional Flow Definition:

In setting rules on each Step, you can set up automatic 'terminate' and 'turn around to Exception flow', instead of previous behavior at the deadline i.e. 'Alerting' or 'End'. (BPMN Timer Boundary Event)

Mitigation of Looping Structure Restriction:

Previously, a Looping structure which consists of only Auto-processing had not been allowed. Now you can compose Looping with Auto-processing only, such as 'Email Transmission' (Event element) and 'Script processing' (Service Task element). However, it will become an error if exceeding 500 steps before all the process is finished.

Dashboard:

You will be able to display the graphs that are generated by each function in one screen, i.e. Number of processed and Total number of Issues, etc.

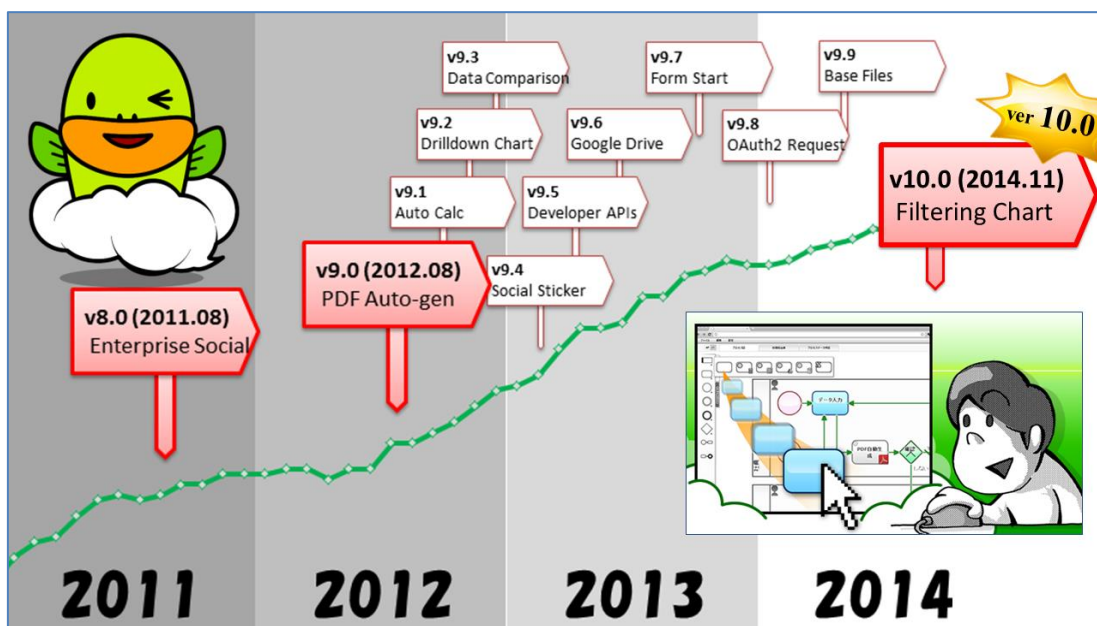

Enhanced HTTP Auto-request:

It became to support more communication methods for Auto-request processing to external system (OAuth 2.0).

* Please see our Release note for the detail of New Features: <http://www.questetra.com/info/version-1000/>

Future Works

Our target is Improvement on Business Process itself to meet the changes of business environment, on monitoring the visualized operational progress. Modeling of Business flow and designing Data items is not an easy thing to do. We will enhance the features to understand the operational progress and processing performance easier, to support worker-driven business improvement.
