

Cloud BPM v11.10 Retrieves Files Itself

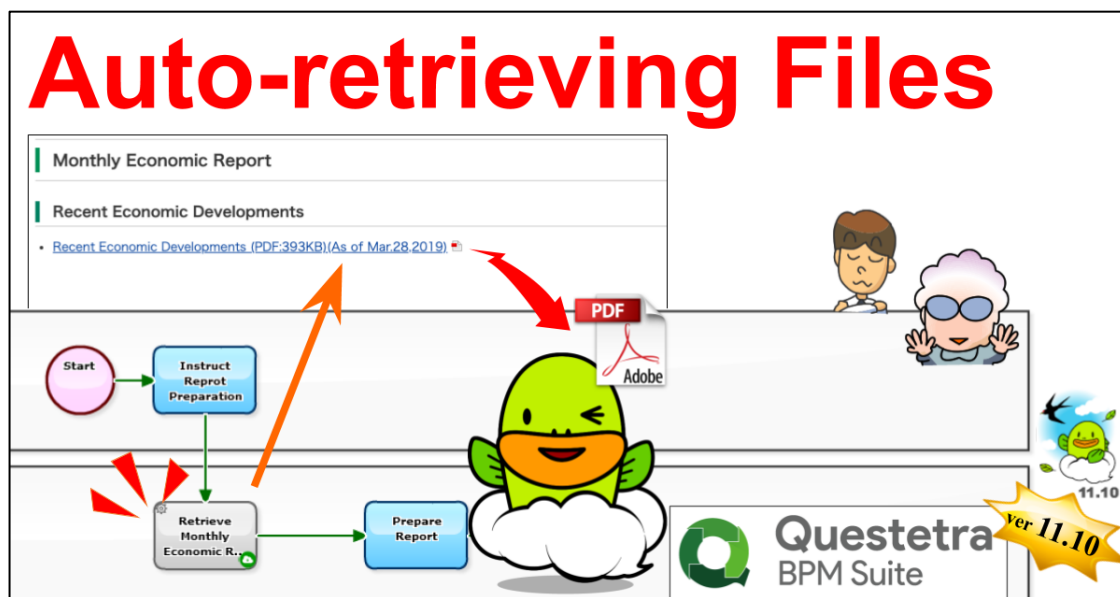

- Directly imports files released by the government into business data -

Kyoto, Japan - April 8th, 2019 - Questetra, Inc., the global SaaS provider of Business Process Management (BPM), today announced that they have published the new version 11.10 of the Cloud-based Workflow product "Questetra BPM Suite" on Apr. 8th, 2019. This new version is capable of importing designated files into Business data automatically. In a Workflow App for corresponding to document request, for example, document files to be sent to the customer is attached automatically.

In daily work, "files" are used in various scenes. To deal with many files, the effort of downloading the files and uploading them to the system is iterated. While work styles reform being promoted so productivity improvement has been attracted much attention, if you can automate file-related tasks, you can expect to be able to concentrate on more added value operations.

Until now, retrieving files stored on the Internet was possible by HTTP communication and simple programming, but it required preparation based on the knowledge regarding communication and programming. On and after the new version 11.10, a Service Task for "downloading files from any website" is added. With this, you can easily obtain files from any web site simply by placing and setting modeling elements on a Workflow diagram. By utilizing this feature, it is possible to configure a scheme that automatically attaches monthly statistical data (PDF) published by the government every month or catalog file in responding to the customer request.

Questetra BPM Suite

Cloud-based Workflow "Questetra BPM Suite" is a business platform for realizing environments of paperless and remote-working.

Business issues are controlled according with Business Flow Diagram. When a process reaches human task, the user will be asked to input. Also, when an issue reaches to automated Step, the predetermined processing (server-side processing) such as "Generate PDF" and "Save to cloud storage" is performed automatically. (BPM: Business Process Management)

You can apply it to various business operations such as "Approval request flow", "Document translation flow", "Quality check process", "Invoice issuance process". Process owner of each Business Process can practice "improvement of Business Process" little by little in daily work. (Examples of Business Flow Diagram: <https://en.workflow-sample.net/>)

Automatic File Retrieving

Using this Service Task, files on any website can be automatically set (attached) to File type Data Item. Instead of you had to download a file on the Internet manually and then upload (attach) it to File type Data Item so far, you can automate this task.

The image shows a configuration window for a service task named 'Retrieve Monthly Economic Report'. On the left, a workflow diagram shows a 'Start' node leading to 'Instruct Reprot Preparation', which then leads to 'Retrieve Monthly Economic R'. A red arrow points from the text 'Specify the File URL' to the 'C1: File URL' field in the configuration panel. The configuration panel includes fields for 'C1: File URL' (with a formula reference), 'C2: Data Item to add the file (File)' (set to 'Economic Report File'), and 'C3: Downloaded File Name' (with a formula reference). The Questetra BPM Suite logo and 'ver 11.10' are visible at the bottom left of the screenshot.

Other Improvements

Slack File Upload:

Using this Service Task, it is possible to post files to the specified channel of Slack, an enterprise social networking. You can check files (deliverables, etc.) created and confirmed on a Workflow on the e-chat that you use on a daily basis.

Expansion of utilization of Field Name:

In Service Task (Data Assignment), it becomes possible to write formulas using "Field Names". Utilizing Field Names, maintainability will be improved since checking of configuration becomes easier for good visibility.

Easy configuration for OAuth2.0:

Configuring a Service Task (Add-on), OAuth2 setting can be done by selecting.
