

Cloud BPM v13.0 Automatic Process Start Enhanced - Process start triggered by Box, kintone, Google Calendar -

Kyoto, Japan, April 12th, 2021, Questetra, Inc., the global SaaS provider of Business Process Management (BPM), today announced that they have published the new version 13.0 of the Cloud-based Workflow product Questetra BPM Suite. This new version is capable of automatically starting Business Processes triggered by data handled in popular business-oriented SaaS products such as Box, etc.

Today, various business-oriented SaaS products have come to be used for promoting Digital Transformation and to build frameworks to support remote working. However, even though some sort of effect is achieved, there is still the problem that it takes a lot of time and effort to exchange data between multiple SaaS products.

With the new version of Questetra BPM Suite, it is possible to build a mechanism, without coding, that automatically assigns an Examination Process to the appropriate person in charge when a contract document is placed in, for example, the file storage service Box. This will allow you to reduce the time and effort for work requests via email or chat services.

It is also able to build such a mechanism using data registered in kintone and Google Calendar in addition to Box as a trigger.

<Business Process start in cooperation with SaaS>

【Questetra BPM Suite】

Cloud-based Workflow Questetra BPM Suite is a business platform for realizing paperless environments and remote-working. Business issues are controlled according to a Business Flow Diagram. When a Process reaches a Human Task the user will be asked to add their input. Also, when an issue reaches an automated Step the predetermined processing (server-side processing) such as generating a PDF and saving it to cloud storage is performed automatically. (BPM: Business Process Management)

You can apply it to various business operations such as an Approval request flow, Document translation flow, Quality check process, and Invoice issuance process. Process owners of each Business Process can practice the

Improvement of Business Processes little by little in daily work. (Examples of Business Flow Diagrams: <https://questetra.zendesk.com/hc/en-us/articles/360012492211>)

【Automatically starting a new business operation linked with SaaS】

Start Events have been added that automatically start Processes when new data (or files) are registered in SaaS. Box, kintone, Google Calendar are supported. *Available Editions: Advanced, Professional, Enterprise

Setting of Process Start Linked with Box

The screenshot displays a process configuration window titled "Start Process when File has been uploaded on a Box specified folder." The window is divided into two main sections: a process flow diagram on the left and a configuration form on the right. The process flow diagram shows a "Manager" role with an "Approve" task, and a "Legal Examiner" role with a "Legal Examiner Manage" task. The configuration form includes the following fields:

- C1: OAuth2 Setting *
box-oauth2
[Set up Setting]
- C2: Parent Folder ID (Root Folder ID) *
96O17735X51 :7
Specify the folder to trigger a Start when a file is placed in it (Folder ID)
- C3: Data item to save File ID *
file id
Data Type: String (single line)
- C4: Data item to save File Uploaded Datetime
file uploaded datetime
Data Type: Datetime

In the bottom right corner, there is a yellow starburst graphic with the text "ver 13.0" and the Questetra BPM Suite logo.

<Settings that automatically start a Business Process when files are placed in the folder in Box>

【Other Improvements】

<Box: Download File>

This new Service Task allows you to automatically attach files stored in Box to a File-type Data Item. In the case of a Contract Creation workflow, for example, it will be possible to achieve a state in which the contract template saved in Box has been imported in advance. *Available Editions: Advanced, Professional, Enterprise

<Box: Delete Shared Folder Link>

This new Service Task allows you to automatically delete a Shared Link to a folder in Box. For example, it will be possible to build a mechanism in which a folder that has been set to be shared will automatically stop being shared after a specified period of time. *Available Editions: Advanced, Professional, Enterprise

<Automatic generation of Google Meet URL>

In a Service Task where appointments are automatically added to Google Calendar, the URL of Google Meet will be automatically generated and added to the appointment information. For example, in the business of managing online meeting reservations with customers, you can build a mechanism where once you enter the date and time of the meeting, the appointment with the Meet URL set is automatically registered, and the customer is informed of the URL by the email notification function. *Available Editions: Advanced, Professional, Enterprise

See the release notes for details.
